

Radio Frequency Propagation Validation
Jose Monterroso
Status Update 5

This week I was able to get SPLAT! data similar to what Kirk had in the 3-timestamp file that he gave me. I was also able to graph each timestamp with its corresponding SPLAT! data equivalent. There was a minor error with the factor associated with SPLAT! but this has been calculated by Gary. This coming week I plan to acquire a few data points of my own and their corresponding SPLAT! data. I will try to get the same radios but on different frequencies like 2500 MHz. I will also continue to work on the paper.
