

Radio Frequency Propagation Validation
Jose Monterroso
Status Update 3

This week was a bit challenging for me, as I had lots of work from other classes. However, Gary beat me to a powder profile, but thanks to him I didn't have to get the appropriate antenna location and terrain files. The idea now is for me to use SPLAT! to produce graphs of my own mimicking Kirks data. I will be using a linear regression to compare the data. Once I am able to produce similar results I can move on to mobile UE Radio Propagation.
