

Radio Frequency Propagation Validation
Jose Monterroso
Status Update 2

This week was a bit more straight forward. I was able to get some good papers and start on my related works section, as well as figure out the format of my paper. I also worked on SPLAT!. I was able to download it on a node machine, my next big step is to download all the needed files to get the modeled RF propagation of the POWDER radio systems. After this I hope to get familiar with producing models and comparing them to the data that Kirk has already acquired. However, the endgame goal is to do RF propagation on mobile endpoints.
